

**HONEY LAKE MANAGEMENT PLAN
COMMUNITY WORKSHOP
Milford Community Center
September 23, 2004
1:30 pm**

Please join California State Lands Commission staff and members of the Honey Lake Conservation Team (HLCT) for a second community workshop to help us develop a Honey Lake Management Plan. The primary topics to be discussed at this workshop are:

- ♦ The Carson Wandering Skipper (CWS), an endangered butterfly species;
- ♦ Priorities for HLCT's proposed, limited, removal of tall whitetop; and
- ♦ Possible public access points to Honey Lake.

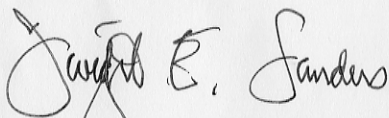

Enclosed with this invitation are copies of the CWS fact sheet and map of its distribution around the lake, tall whitetop fact sheet and map of its local distribution, and the draft proposal and map for possible public access points. HLCT members will discuss field survey results and planning efforts conducted so far at Honey Lake and plans for additional future work. State Lands Commission staff will also be present to receive your comments and suggestions and respond to questions about the planning process.

Using the public comments from this workshop, the HLCT will prepare a draft Honey Lake Management Plan and a draft CWS Conservation Strategy. Both draft plans will be submitted to the California State Lands Commission for its consideration. The CWS strategy will also be submitted to the US Fish and Wildlife Service.

You can submit your comments at the workshop, in writing, at our website (http://www.slc.ca.gov/Feedback_Form/Feedback_Form.htm) or via e-mail.

We look forward to seeing and talking with you on September 23, 2004.

Sincerely,

Dwight E. Sanders, Chief, Environmental Planning and Management
